

## Real Estate Application

### ABOUT PROJECT

Our team upgraded Ruby version from 2.0 to 2.3 and Rails version from 3.2 to 5.0 to make this application more secure and future proof. We also made sure the application can support newer and more secure versions of third-party libraries and services. Additionally, the team decided to split frontend and backend to separate applications: migrate frontend from legacy jQuery codebase to React, and Rails backend to Grape based JSON API.

**SOFTWARE:** Mobile Application

**BUSINESS DOMAIN:** Service

**STAGE:** Production

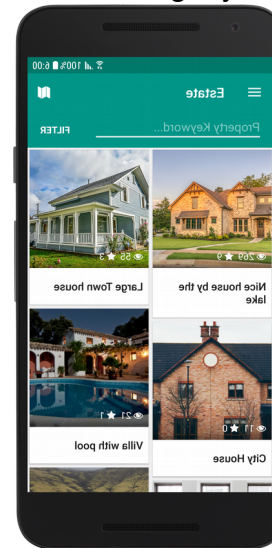

### OUTCOME

**5 months**  
Project Duration

**4 people**  
Project Team

### TECHNOLOGY

- Ruby 2.3
- Ruby on Rails 5.0
- Grape
- JSON API
- Postgres
- Sidekiq
- EcmaScript2015+
- Social networks APIs
- MLS (Multiple Listing Service)
- TREB (Toronto Real Estate Board)
- EWS (2007, 2013)
- AWS
